

Construction Advisory

April 2017

UPDATE: STONE COLUMN INSTALLATION NORTH OF MAIN POST TUNNELS

Through April, crews are scheduled to install underground stone columns north of the Main Post Tunnels to stabilize the soil for seismic safety. Large rigs with vibrating columns will inject rock into the ground, creating three-foot-diameter, 50-foot-deep foundations of compacted material in approximately 3,500 locations.

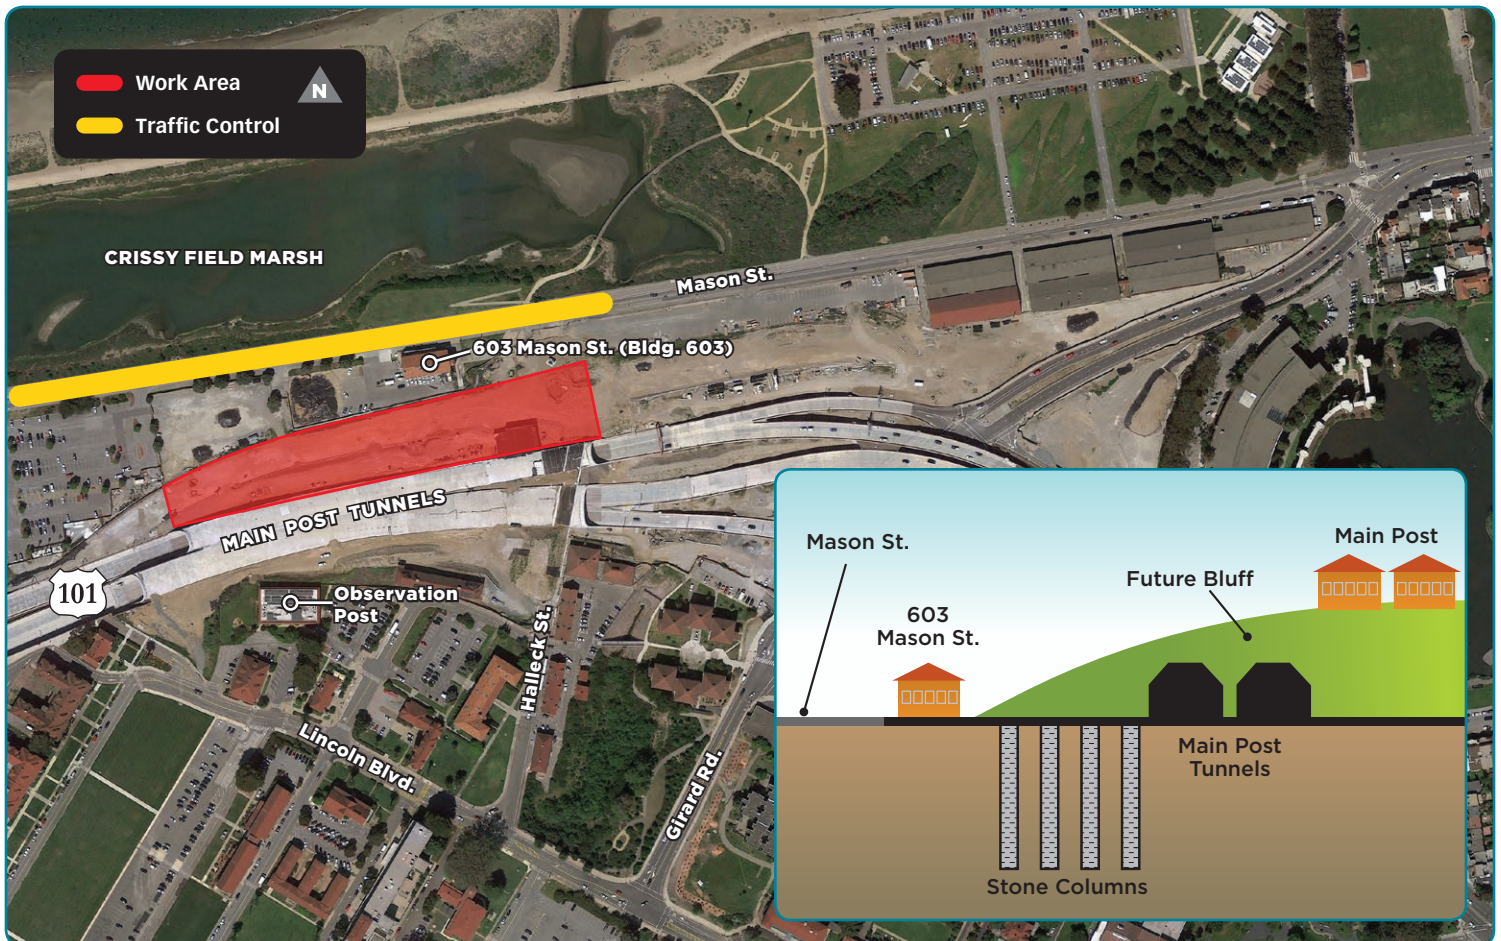

This activity is part of site preparation for the future bluff that will connect the Main Post tunnel tops to Mason Street and facilitate the Presidio Tunnel Tops project. The stone columns will help prevent settlement or liquefaction during a seismic event.

This work will require a high volume of truck traffic for material delivery at Mason Street. Noise impacts are expected primarily north of the work site. This work will also impact the Observation Post viewshed.

There will be traffic control along Mason Street during the entire operation. Drivers can expect intermittent delays. Please exercise caution around large equipment and follow instructions from signage and flaggers.

Thank you for your patience during construction.

All dates are subject to change due to weather and unforeseen conditions. Please visit www.PresidioParkway.org for up-to-date information.
